

BROADCAST-New Study Finds People are Drinking Too Much

You might have seen the hundreds of Tik Tok social media videos featuring alcohol and funny lip synced monologues about drinking but a new study finds a sobering reality about a massive uptick in alcohol consumption.

Results of [new research](#) published in the Journal of the American Medical reveals nationwide, alcohol consumption increased 14% among all adults over 30 years old, compared to this time last year. But it was 19% for adults aged 30 to 59 and 17% among women.

The study concludes excessive alcohol use may lead to or worsen existing mental health problems, such as anxiety or depression, which may themselves be increasing during COVID-19.

Susanne Ringhausen, Manager Health and Psychological Services for OSF HealthCare Saint Anthony's Health Center in Alton, Illinois says many people are feeling stressed by a lack of control over important aspects of their daily lives.

“You know there's anxiety, lots of life changes, people are self-isolating so there's loneliness, boredom and that kind of anxiety and stress can trigger that kind of drinking escalation. We would call that “relief drinking.” (:15)

But how much is too much? New recommendations from the panel which reviews the latest clinical research is suggesting new federal government Dietary Guidelines advise individuals to limit their daily alcohol consumption to one drink a day for both men and women.

Ringhausen warns the cumulative effect of too many Zoom happy hours can negatively impact your health. Chronic alcohol use can also lead to [Acute Respiratory Distress Syndrome \(ARDS\)](#), a potentially deadly condition in which fluid builds up in the lung -- a condition often seen in the more severe COVID-19 patients.

We have a culture that celebrates the idea of drinking as a solution with catch phrases such as “Anytime is wine time” and “Its 5 o'clock somewhere,” but Ringhausen says you don't have to be an alcoholic for alcohol consumption to have a negative impact on your life.

“Where someone might have increased tolerance for alcohol, meaning as they drink more they need to drink more to have the same effect on their body and mind and so someone with Alcohol Use Disorder might experience that sudden urge to drink and really start to avoid non-alcohol related activities with other people.” (:22)

According to the CDC, people who are alcohol-dependent have compromised immune systems, reducing the body's ability to fight off infectious diseases such as COVID-19. And the more you drink, the higher your risk. Ringhausen says heavy drinking can lead to more risky behavior when it comes to COVID-19 precautions.

“As our inhibitions go down and our drinking goes up, people can ignore the CDC guidelines for masking and physical distancing. And safe practices ... some of that goes out the window and that's where you're seeing in the news, it's (the virus spread) escalating and where intoxication is contributing to that.” (:26)

Ringhausen suggests looking for more positive outlets to relieve stress and help you cope during these strange and unpredictable times.

“Exercise routines or even fun scrapbooking activities or any kind of hobby you could imagine could be done virtually via Zoom so it does not have to revolve around drinking.” (:15)

Six months into the pandemic, health leaders who are worried about the lasting impact of this big spike in drinking say it might be a good time to reflect on your habits.

“If you see yourself slipping into a bad pattern, take a break. Just take a break from drinking and maybe don't keep it in the house for a while and that'll help you cut back or get back on track. Let other friends and family know you're cutting back. That will be helpful to get some support.” (:16)

The National Institute on Alcohol Abuse and Alcoholism defines binge drinking as a pattern of drinking that brings the blood alcohol (BAC) to 0.08 or higher. For a typical adult, that translates to a man having five or more drinks or four or more drinks for a woman within two hours. If you find yourself drinking excessively on a regular basis, Ringhausen stresses, there is support to help you make a positive change.

“You're not alone. I want people to know it's easy to access help. Contact OSF; we have behavioral health navigators as well as behavioral health counseling available when people want to consult and just go over an issue that's going on in their life. It can be just one time or they come in for a few sessions to get a handle on a life issue. But, they are not alone.” (:25)

If you are concerned about your drinking, you can take an [Alcohol Use Assessment](#) online at OSF HealthCare's website at osfhealthcare.org
